The diagram illustrates the inheritance hierarchy of PictureElement. At the top is the **IFrameProperties** interface, which defines methods for setting a path, aspect ratio, description, field, and attachment, as well as methods for importing from variant, picture file, and querying intrinsic size. Below it is the **IOlePictureElement** interface, which includes an **Import Picture** method. The **PictureElement** class is the base class for several derived classes: **BmpPictureElement**, **EmfPictureElement**, **GifPictureElement**, **JpgPictureElement**, **PngPictureElement**, **TifPictureElement**, and **Jp2PictureElement**. Each derived class has its own unique set of methods.
